

Surrey Heartlands ICS
Primary Care Adult Headache Referral and Management Guidance

February 2023

Headache Pathway

For all patients, offer lifestyle advice, trigger factors, review if on COC, headache diary, warn of medication overuse.

For headache diary, consider apps such as migraine buddy app.

- ** Other diagnosis to consider:
- · Cervicogenic headache / OSAS
- TMJ
- Primary stabbing headache
- Trigeminal neuralgia (does require non urgent imaging)
- · Primary sex headache
- **TACs: Hemicrania** Continua, Paroxysmal Hemicrania, SUNCT

Analgesic Overuse? >15 days/m NSAID /paracetamol

>10 days/m opiates/triptans Supported withdrawal of analgesia **Identify and treat** underlying syndrome

HEADACHE For all headache types History, examination (BP) and consider optician review for Fundoscopy After first primary care review if diagnosis is not clear, give headache diary and review patient at later date** If still unclear after review. consider electronic advice discussion if specific query or referral to Headache Clinic. 'Amber and Red Flags' - See page 2 and 3 for advice on

Tension Type Headache < 8 days 8-15 days /month /month Simple analgesia (warn about Consider medication starting overuse) Amitryptiline screening for potential secondary causes of headache.

> 15 /month Start Amitryptiline Reconsider diagnosis (chronic migraine or secondary headache) Consider

electronic

advice and

guidance or

headache

clinic

referral

Acute Neurology Clinic / Headache Clinic for urgent review/ Advice Consider angleclosure glaucoma as differential in elderly

Cluster headache

(new diagnosis or

relapse

Migraine Low High frequency frequency < 8 days 8-15 days /month /month Limit analgesia **Prophylactic** Rx, any of: Acute treatment Propranolol (consider Topiramate prophylaxis, Amitriptyline menstrual Candesartan migraine) Failure to respond to 2-3 prophylactics at adequate dose least 2-3 months.

Screening Advice

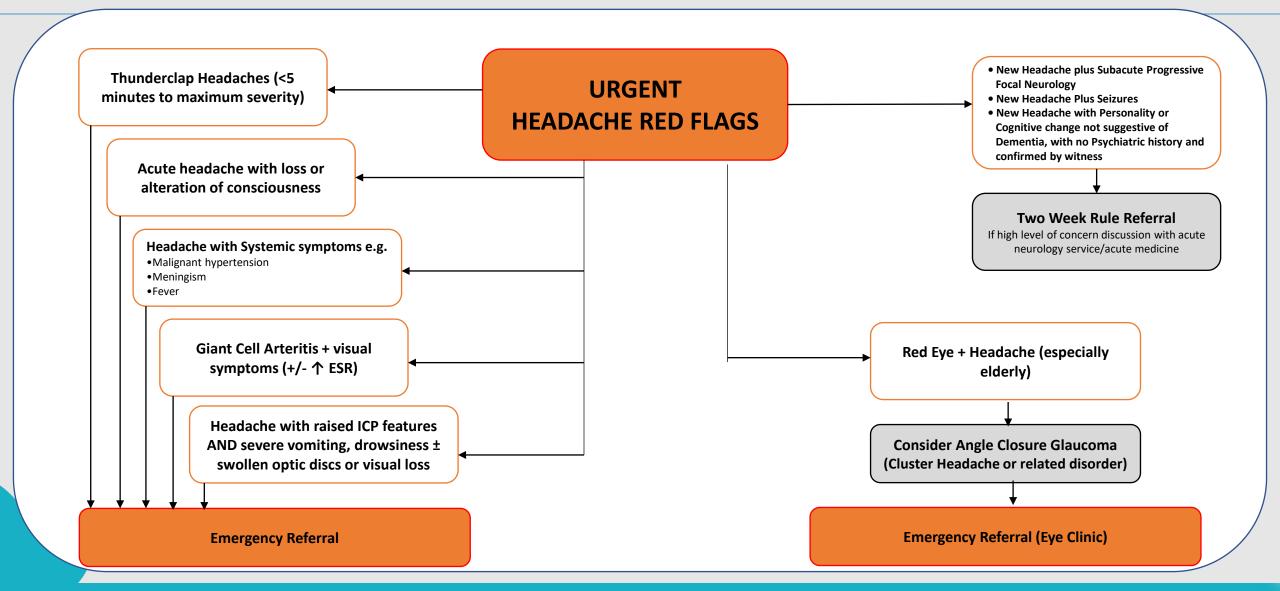

HEADACHE AMBER FLAGS – pause and consider secondary causes. For all amber pathway patients consider discussion with neurologist Normal Re-evaluate history with headache diary via advice and guidance/mobile/consultant connect ESR, (common benign syndrome). If genuinely new CRP headache consider headache clinic referral >50 yr old with genuine new headache or symptoms Urgent FBC, ESR, CRP Consider Giant Cell Arteritis and refer to acute Raised suggestive of GCA (e.g. jaw claudication, PMR) medicine/rheumatology. Refer urgently ESR, before ESR result if visual symptoms (>50) New headache with recent head trauma within the Consider CT head (though local pathway direct to test) last 3 mths if > 45yrs and/or anticoagulation New headache in 3rd Trimester of pregnancy or early Consider electronic advice and/or urgent referral through acute obstetrics /neurology (Migraine/Pre-eclampsia/Cerebral venous sinus thrombosis). post-partum. 1.If known to Oncology contact patient's oncology team directly New headache in existing cancer or 2.If not known to oncology consider two week rule referral **OR** if immuno-compromised immunocompromised consider acute neurology referral or direct to test via neurology Raised ICP (Headache on recumbency, bending forward, swollen optic discs, SOL/IIH - if typical raised ICP headache refer TWR If unclear Valsalva ± other raised ICP features consider headache clinic referral Postural headaches If no recent LP or other spinal procedure, consider electronic **Low ICP** (Headache occurs rapidly on standing/relieved rapidly on lying) advice / headache clinic referral Exercise induced or cough induced headaches -Consider electronic advice or Headache Clinic Referral. occurring every time with exercise. New daily persistent h/ache abrupt onset one day without Possible secondary headache: consider imaging via A and G/TWR or Headache remission since & without antecedent history of h/ache Clinic Referral. Consider carefully if any red flags. If not, review with headache diary. If no clear Substantial change in headache phenotype diagnosis evident, consider non-urgent Headache Clinic Referral.

Red Flags

Monthly Headache Diary

Name: DOB: Month: Year:

Date	Day	Time	Severity	Duration	Nausea (N)/	Painkillers	Notes
			(1-10)	(mins/hrs)	Vomiting (V)	(Name/Dose)	(triggers, period, changes in preventatives, side effects etc.)
